

# Summary of the Central Region

## 2015 WYOMING PROFILE of Demographics, Economics, and Housing, Ending December 31, 2015

The **Wyoming Profile**, sponsored by the Wyoming Housing Database Partnership, is undertaken semi-annually to provide current, quality information about factors influencing the development, production, use, rehabilitation, demand, and need for **housing and related services** in Wyoming's communities. **This regional summary**, focusing on the Central Region, is one of six publications that inspect a group of counties in the state, as shown in the map presented below. The **Central Region** comprises Carbon, Converse, and Natrona counties.

### Demographics

According to U.S. Census Bureau data, between 2000 and 2010, the Central Region's population rose from 94,224 to 105,168, or by 11.6 percent. The most recent census estimate put the population of the Central Region at 111,575 as of July 1, 2014, which indicates an increase of 5.8 percent since 2010. The growth in population in the region can be attributed to the natural increase of the overall population, the net of births minus deaths, as well as the net migration. Changes in population in the Central Region are shown in Diagram 1.

**Diagram 1. Central Region Population**  
1970–2014 Census Bureau Data

The Wyoming Housing Database Partnership utilizes quarterly data from the Wyoming Department of Transportation (DOT), regarding driver's licenses

of new or departing residents to track changes in population. While the net of surrendered and exchanged driver's licenses was low in 2000 with only 12, there were substantial increases in the following years, with in-migration in 2014 totaling 595 persons and in-migration in 2015 representing an additional 78 persons, as shown in the chart below. These data also indicate that growth was moderate in the Central Region.

**Diagram 2. Central Region Migration**  
2000 – 2015 WYDOT Data

### Economics

Economic growth in the region can be examined through labor force statistics. The labor force represents those persons working or seeking work, as reported by the Bureau of Labor Statistics (BLS). From 1990 to 2014, the labor force in the Central Region expanded relatively modestly at an average annual rate of 1.1 percent per year, as shown in Diagram 3. However, between 2013 and 2014, the labor force rose by 0.8 percent to a level of 60,079 persons. The number of persons working also rose to 57,645 persons in 2014.

**Diagram 3. Central Region Labor Force**  
1990–2014 BLS Data

The national recession contributed to a rapid rise in unemployment between 2008 and 2010. Still, the unemployment rate for the Central Region fell in 2014 to 4.1 percent or by a decrease of 0.3 percent since 2013, as shown in Diagram 4.

**Diagram 4. Central Region Unemployment Rate**  
1990–2014 BLS Data

Low unemployment rates often cause upward wage pressure in the labor markets, and in turn, cause earnings to increase. In 1979, average earnings by place of work in the Central Region was \$45,704 in real 2014 dollars. Unfortunately, this level of earnings was not sustained, and the average declined. However, since 2010, earnings increased at an annual growth rate of 0.5 percent. As of 2014, the year for which the most recent data are available from the Bureau of Economic Analysis (BEA), the average earnings by place of work was \$59,663, shown in Diagram 5.

**Diagram 5. Central Region Average Earnings Per Job:**  
1970–2014 BEA Data, Real 2014 Dollars

Personal income is made up of earnings and unearned income sources, such as dividends, interest, rent, and government transfer payments. Together these income sources, when divided by population, constitute per capita income. This income measure also shows that the rising economic welfare of the Central Region was adversely affected in 2009. Real per capita income in 2014 was \$57,287 and was roughly 16.6 percent higher than it was in 2010, as shown in Diagram 6, but still lower than seen in 2008.

**Diagram 6. Central Region Per Capita Income**  
1970–2014 BEA Data, Real 2014 Dollars

## Highlights...

- The population of the Central Region has grown by 5.8 percent from 2010 to July 1, 2014, to 111,575.
- The unemployment rate was 4.1 percent in 2014. A decrease of 0.3 percent since 2013.

## Housing

Consequences of economic change are often seen in the housing market. During the late 1970s, when incomes were increasing, the housing sector was very active and there was a significant amount of housing construction in the Central Region. Like employment and income, the housing market fell sharply during the recession of the early 1980s; 1981 saw 1,055 total permits, of which 383 were for single-family units, but by 1987, there were only 20 permits, all of which were for single-family units. The issuance of single-family unit permits reached a peak of 622 in 2007, fell to 305 in 2010, and rose to 394 in 2014, as shown in Diagram 7.

**Diagram 7. Central Region Residential Permits**  
1980–2014 Census Bureau Data

From 1980 to 2014 the real value of construction, representing only the cost of building the unit and not the land and infrastructure, increased in the Central Region and in Wyoming, with the statewide average rising to \$295,855 and the Central Region's average rising to \$214,400 in 2014, as shown in Diagram 8.

Still the average real value of new construction in the Central region was the second lowest of all regions in the state in 2014, as shown in Diagram 9.

County tax assessors in Wyoming report housing prices for existing homes sold on 10 acres or less throughout the state to the Wyoming Department of Revenue (DOR). As shown in Diagram 10, the Central Region had an average existing price of \$222,772 in 2014, which was lower than all other regions in the state; the Teton Region, which is not shown, had an average price of \$1.4 million. In the Central Region, existing housing had higher values than did new construction.

Every six months since 2001, the Wyoming Housing Database Partnership has conducted a survey of rental properties throughout the state. In December of 2015, the survey covered 8,535 rental units in the Central Region. Rental vacancy rates rose to 7.3 percent in the second half of 2015, as seen in Table 1.

Rental Vacancy Survey Data ( a = December, b = June)				
Year	Sample	Total Units	Vacant Units	Vacancy Rate
2004a	80	4,475	155	3.5%
2004b	83	4,600	218	4.7%
2005a	68	3,298	117	3.5%
2005b	75	6,267	139	2.2%
2006a	71	3,991	83	2.1%
2006b	78	4,363	68	1.6%
2007a	97	5,403	33	0.6%
2007b	100	5,151	58	1.1%
2008a	104	5,794	69	1.2%
2008b	109	5,057	110	2.2%
2009a	124	4,321	240	5.6%
2009b	162	5,643	360	6.4%
2010a	180	6,874	342	5.0%
2010b	174	5,995	348	5.8%
2011a	208	6,067	234	3.9%
2011b	197	6,238	421	6.7%
2012a	207	6,540	163	2.5%
2012b	211	7,193	140	1.9%
2013a	203	7,406	287	3.9%
2013b	207	7,387	303	4.1%
2014a	221	7,717	242	3.1%
2014b	235	7,951	316	4.0%
2015a	254	7,951	316	4.0%
2015b	250	8,535	622	7.3%

The Central Region had the third lowest vacancy rate compared to the state rate of 6.9 percent. The vacancy rates for each region in Wyoming can be seen in Diagram 11.

### Highlights...

- According to DOR data, the average home price in the Central Region was \$222,772 in 2014.
- The December 2015 rental vacancy survey revealed a vacancy rate of 7.3 percent, as compared to the state rate of 6.9 percent.

### WCDA Housing Needs Forecast

The 2015 Wyoming Housing Needs Forecast modeled three separate growth scenarios: moderate, strong, and very strong. Only the strong growth scenario is presented

here. In the strong growth scenario, population is forecasted to increase at an average annual rate of 1.1

percent to 147,864 persons in 2040, as shown below. The Wyoming Housing Needs Forecast also modeled household formation, which was computed using forecasted values of persons per households and population. The strong growth scenario household formation forecast estimates an increase of 13,144 households between 2010 and 2040. This represents an increase of 30.8 percent from the 2010 level, or an average annual growth rate of 0.9 percent, as shown below.

The 2015 Wyoming Housing Needs Forecast separated forecasted households into owner- and renter-occupied households. Owner-occupied households were forecasted to increase from 30,143 households in 2010 to 39,962 households in 2040. This represents an increase of 9,819 owner-occupied households and an average annual growth rate of 0.9 percent, as shown in Diagram 14.

Renter-occupied households were forecasted to increase from 12,534 households in 2010 to 15,859 households in 2040. This represents an increase of 3,325 renter-occupied households and an average annual growth rate of 0.8 percent, as shown in Diagram 15.

*This regional summary was prepared for the Wyoming Housing Database Partnership. The complete 2015 Wyoming profile is available online on the WCDA website, [www.WyomingCDA.com](http://www.WyomingCDA.com).*
