

Summary of the Northeast Region

2018 WYOMING PROFILE of Demographics, Economics, and Housing, Ending December 31, 2018

The **Wyoming Profile**, sponsored by the Wyoming Housing Database Partnership, is undertaken semi-annually to provide current, quality information about factors influencing the development, production, use, rehabilitation, demand, and need for **housing and related services** in Wyoming's communities. **This regional summary**, focusing on the Northeast Region, is one of six publications that inspect a group of counties in the state, as shown in the map presented below. The **Northeast Region** is comprised of Campbell, Crook, Johnson, Sheridan, and Weston Counties.

Demographics

According to the U.S. Census Bureau, between 2000 and 2010, the Northeast Region's population rose from 79,864 to 98,109 or by 22.8 percent. The most recent Census Bureau count placed the population in the Northeast Region at 99,265 as of July 1, 2017, which indicates a growth rate of 1.2 percent since the 2010 Census. The growth in population in the Region can be attributed to the natural increase of the overall population, the net of births minus deaths, as well as the net migration. The changes in population are shown in Diagram 1.

Diagram 1. Northeast Region Population
1970–2017 Census Bureau Data

The Wyoming Housing Database Partnership utilizes quarterly data from the Wyoming Department of Transportation (WYDOT) regarding driver's licenses of

new or departing residents to track changes in population. While the net of surrendered and exchanged driver's licenses was low in 2004 at 273, there were substantial increases in the following years, with net in-migrants at 1,467 persons in 2010. This number fell in 2018 and decreased by 1,152, as shown in Diagram 2.

2000 – 2018: WYDOT Data

Economics

Economic growth in the region can be evaluated through labor force statistics data, which represent those persons working or seeking work as reported by the Bureau of Labor Statistics (BLS). In the Northeast Region, the labor force expanded steadily from 1990 to 2017, rising at an average annual rate of 1.1 percent per year, as shown in Diagram 3. However, between 2016 and 2017, the labor force decreased by 3.8 percent to 50,520 persons. The number of persons working reached 48,303 in 2017.

Diagram 3. Northeast Region Labor Force
1990–2017 BLS Data

The national recession contributed to a rapid rise in unemployment between 2008 and 2010. Still, unemployment rates decreased from 5.6 percent in 1992 to a low of 2.5 percent in 2007, but spiked to a high of 6.3 percent in 2010. In 2017, it is at 4.4 percent, as shown in Diagram 4.

Diagram 4. Northeast Region Unemployment Rate
1990–2017 BLS Data

Low unemployment rates often cause upward wage pressure in the labor markets, and in turn, cause earnings to increase. In 1990, average earnings by place of work in the Northeast Region was \$36,532 in real 2017 dollars. Unfortunately, this level of earnings was not sustained, and the average declined through the 1980's. However, since 1990, earnings increased at an annual growth rate of 1.7 percent. As of 2017, the year for which the most recent data are available from the Bureau of Economic Analysis (BEA), the earnings by place of work was \$50,359 shown in Diagram 5.

Diagram 5. Northeast Region Average Earnings Per Job:
1990–2017 BEA Data, Real 2017 Dollars

Personal income is made up of earnings and unearned income sources, such as dividends, interest, rent, and government transfer payments. Together, these income sources, when divided by population, create per capita income. Real per capita income reached \$49,934 in 2017 and was 6.0 percent lower than in it was in 2010, as shown in Diagram 6.

Diagram 6. Northeast Region Per Capita Income
1990–2017 BEA Data, Real 2017 Dollars

Highlights...

- The population of the Northeast Region grew by 1.2 since the 2010 Census, to 99,265 persons.
- The unemployment rate was 4.4 percent in 2017, which compared to the state rate of 4.2 percent.

Housing

Consequences of economic change are often seen in the housing market. During the late 1970s, when incomes were increasing, the housing sector was very active and there was a significant amount of housing construction in the Northeast Region. Like employment and income, the housing market fell sharply during the recession of the early 1980s; 1981 saw 767 total permits, of which 287 were for single-family units, but by 1989, there were only 24 permits, all of which were for single-family units. The issuance of single-family unit permits spiked to 817 in 2007, fell to 395 by 2010 and to 199 in 2017, as shown in Diagram 7.

Diagram 7. Northeast Region Residential Permits
1980–2017 Census Bureau Data

From 1980 to 2017, the real value of construction, representing only the cost of building the unit and not the land and lot costs, was on the rise in the Northeast Region. Overall, the value in the Northeast reached \$257,802 in 2017 while the state value increased to \$324,025, as shown in Diagram 8.

The average real value of new construction in the Northeast Region was the fourth highest as compared to other areas in the state in 2017, with only the Teton Region far higher, as shown in Diagram 9.

County tax assessors in Wyoming report housing prices for existing homes sold on 10 acres or less throughout the state to the Wyoming Department of Revenue (DOR). As shown in Diagram 10, the Northeast Region had an average price of \$253,740 in 2017, which was second highest for regions in the state. In the Northeast Region, existing housing was less expensive than new construction.

Every six months since 2001, the Wyoming Housing Database Partnership has conducted a survey of rental properties throughout the state. In the second half of 2018, the survey covered 5,086 rental units in the Northeast Region. While vacancy rates declined to 0.7 percent in late 2006, they rose to 12.9 percent in late 2017. The vacancy rate in the second half of 2018 decreased to 6.6 percent in the Northeast Region, as shown in Table 1.

Rental Vacancy Survey Data (a = June, b = December)				
Year	Sample	Total Units	Vacant Units	Vacancy Rate
2007a	89	3,176	25	0.8%
2007b	93	2,555	25	1.0%
2008a	122	3,611	190	5.3%
2008b	128	3,589	179	5.0%
2009a	143	4,784	231	4.8%
2009b	171	3,919	317	8.1%
2010a	218	5,442	399	7.3%
2010b	229	5,481	367	6.7%
2011a	255	5,426	367	6.8%
2011b	262	6,400	414	6.5%
2012a	296	6,683	419	6.3%
2012b	313	6,743	543	8.1%
2013a	311	6,627	516	7.8%
2013b	312	6,210	361	5.8%
2014a	313	5,996	200	3.3%
2014b	299	6,988	156	2.2%
2015a	308	6,090	267	4.4%
2015b	243	5,615	503	9.0%
2016a	268	5,486	580	10.6%
2016b	272	4,993	765	15.3%
2017a	279	5,514	696	12.6%
2017b	230	4,468	557	12.9%
2018a	269	4,753	419	8.8%
2018b	240	5,086	335	6.6%

The statewide vacancy rate was 7.6 percent. The Northeast Region had the third lowest regional vacancy rate in the state with 6.6 percent, as shown in Diagram 11.

Highlights...

- According to DOR data, the average home price in the Northeast Region was \$253,740 in 2017.
- The December 2018 rental vacancy survey revealed a vacancy rate of 6.6 percent, as compared to the state rate of 7.0 percent.

WCDA Housing Needs Forecast

The 2018 Wyoming Housing Needs Forecast modeled three separate growth scenarios: moderate, strong, and

very strong. Only the strong growth scenario is presented here. In the strong growth scenario, population is forecasted to increase at an average annual rate of 1.3 percent to 162,281 persons in 2050, as shown below.

The Wyoming Housing Needs Forecast also modeled household formation, which was computed using forecasted values of persons per household and population. The strong growth scenario household formation forecast estimates an increase of 14,017 households between 2010 and 2050. This represents an increase of 35.7 percent from the 2010 level, or an average annual growth rate of 1.0 percent, as shown in Diagram 13.

The forecast separated forecasted households into owner- and renter-occupied households. Owner-occupied households were forecasted to increase from 28,448 households in 2010 to 42,504 households in 2050. This represents an increase of 14,056 owner-occupied households and an average annual growth rate of 1.0 percent, as shown in Diagram 14.

Renter-occupied households were forecasted to increase from 10,808 households in 2010 to 17,141 households in 2050. This represents an increase of 6,333 renter-occupied households and an average annual growth rate of 1.5 percent, as shown in Diagram 15.

This regional summary was prepared for the Wyoming Housing Database Partnership. The complete 2018 Wyoming profile is available online on the WCDA website, www.WyomingCDA.com.
